Application/Control Number: 09/768,803

Art Unit: 1651

Note:

The proposed amendment raises new issues that would require further consideration and/or search with respect to the amendment of the claims to "mM mg enzyme" in claims 47 and 48, including issues of new matter and under 35 U.S.C § 112. It is also noted that the amendment is not properly indicated in the claims submitted.

Response to Arguments

Applicant's arguments have been fully considered but they are not deemed to be persuasive.

Applicants argue that none of the references alone or in combination teach or suggest the claimed process using haloperoxidase and a salt of ammonium as claimed. However, the use of a haloperoxidase in combination with halide salts and a nitrogen source is old and well known in the art as adequately demonstrated by Allen, which reference teaches a method of using haloperoxidase composition comprising a haloperoxidase, a hydrogen peroxide source, a halide source and an amino acid to clean, disinfect or inhibit microbial growth on any surface by producing hydrogen peroxide (See, e.g., columns 6-7). While the reference admittedly differs from the claimed invention in that the amino acids are not ammonium salts, applicant has only demonstrated that the use of ammonium salts has an unexpected effect whenever the concentration of the ammonium ion 0.25 to 50 mM. There is no evidence of record to demonstrate unexpected effects at concentrations lower than 0.25 mM or higher than 50 mM. Therefore the scope of the showing is not commensurate in scope with the scope of the claims.

The scope of the showing must be commensurate with the scope of claims to consider evidence probative of unexpected results, for example. In re Dill, 202 USPQ 805 (CCPA, 1979), In re Lindner 173 USPQ 356 (CCPA 1972), In re Hyson, 172 USPQ 399 (CCPA 1972), In re Boesch, 205 USPQ 215, (CCPA 1980), In re Grasselli, 218 USPQ 769 (Fed. Cir. 1983), In re Clemens, 206 USPQ 289 (CCPA 1980). It should be clear that the probative value of the data is not commensurate in scope with the degree of protection sought by the claim.

Therefore the rejection is deemed proper and it is adhered to.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irene Marx whose telephone number is (571) 272-0919. The examiner can normally be reached on M-F (6:30-3:00).

Application/Control Number: 09/768,803

Art Unit: 1651

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Wityshyn can be reached on (571) 272-0926. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
